1

How often do you use AI tools like ChatGPT, Claude or Gemini?

POLL

Never · weekly · daily · all the time

2

One word: what makes a company “AI-native”?

WORD CLOUD

3

How long would it take you today to go from an idea to a working prototype?

POLL

1 day · 1 week · 1 month · 6+ months

4

Which step of launching a startup will AI change the most?

RANKING

Research · product · marketing · validation

5

Would you invest €100,000 in a startup idea an AI helped you build?

POLL · REPEAT

Yes · no · need evidence

Live: AI linking millions of data points

Emidio demonstrates a highly complex AI workflow we developed — applied to a new business idea, from market data to a go / no-go.

Millions of data points

Many sources linked in one model

Multiple AI agents

Research, matching and scoring in one flow

From data to decision

The output is a recommendation, not a dashboard

From Idea to Market: Building an AI-Native Business

How AI is changing the way companies understand customers, develop products and launch.

ChatGPT: 1 million users in just 5 days

Time it took to reach 1 million users

5 days

from launch to one million users —
faster than any consumer product
before it.

*For founders: your market — and your
competitors — can now move this fast
too.*

Source: Statista, based on company announcements. ChatGPT launched on 30 November 2022.

AI's IQ: from 96 to 136 in one year

Best AI model on standardised IQ tests — one year apart

2024

IQ 96

Best model, offline test

2025

IQ 136

Best model, Mensa Norway test

Why AI is (still) hardly replacing jobs

Capability is rising fast — but real work is messy

-  So far, hardly any job losses from AI
-  AI hits its limits in complex, dynamic workflows
-  Office and routine work stable so far — despite automation risk
-  Demand for AI skills is growing sharply

For you: AI takes the clean tasks. Building a company is messy work — that is where you add value.

AI's ability to automate jobs is constrained by task “messiness”

AI task success rate by messiness of the task (%)

Tasks taking a human professional ≤ 1 hour. Source: METR / Measuring AI Ability (values read from published chart).

Core skills in 2030

Share of employers calling a skill core today (x) vs expecting it to grow by 2030 (y)

Source: World Economic Forum, Future of Jobs Report 2025, Figure 3.6.

1

AI and big data

the fastest-growing skill of all — almost 9 in 10 employers expect it to grow

2

Thinking skills stay core

analytical thinking, creative thinking, systems thinking

3

Human skills rise with AI

resilience, curiosity and lifelong learning, leadership

The founder profile of 2030: AI-literate, analytical, creative — and curious enough to test.

“Augmented Intelligence”

Not human or machine — the value sits in the overlap

HUMAN

Judgement, context, trust, responsibility

AI

Speed, scale, pattern recognition, tireless testing

AUGMENTED — FOUNDERS

A founder who lets AI research, build and test — and keeps judgement on what is worth building.

Rethinking the path from idea to market

How launching a business worked, what AI enables today — and what AI-native means

	BEFORE	NOW, WITH AI	AI-NATIVE
Market research	Weeks of desk research or an agency	Research agents read the market in minutes	Continuous market sensing — every number tagged with its source
Product	Months and a dev team for a first prototype	A working prototype in an afternoon	Many prototypes in parallel — each one a test
Marketing	One campaign, launched and hoped for	Ten AI-generated variants instead of one	Autonomous experiments, measured live
Decision	Gut feeling and a pitch deck	An AI-written business plan	Evidence-weighted: go, iterate or stop

The trap in the middle column: AI makes it easy to produce a convincing plan — not a validated one.

What we mean by “AI-native”

AI-native is not using more AI tools — it is building the company around them

AI-ENABLED

The old process, plus an AI tool

ChatGPT writes the pitch deck, the copy and the business plan. The steps and the decisions stay the same — just faster.

AI-NATIVE

The process redesigned around what AI makes cheap

Agents research, build and test continuously; founders set hypotheses and decide on evidence. Small teams do what took 20 people.

Agents do the work, humans set direction

Founders choose what to test — agents research, build and run it

Every decision is a hypothesis

“Students will pay €60 a year” is an assumption with a kill criterion

Every loop makes the system smarter

Each experiment sharpens the next — learning compounds

Evidence beats opinion

A click, sign-up or payment outweighs any AI-generated forecast

In one line: an AI-native company does not just generate answers faster — it tests its assumptions faster than anyone else.

Can AI quantify a business opportunity?

Yes — and it will happily invent the numbers. Label every one.

ILLUSTRATIVE — NOT VERIFIED MARKET DATA

20,000

×

5%

×

€60

=

€60,000

potential customers

assumed conversion

annual price

annual revenue

Pessimistic $10,000 \times 3\% \times €60$ · Realistic $20,000 \times 5\% \times €60$ · Optimistic $30,000 \times 8\% \times €60$

Three tags for every number

RESEARCHED

From a named source, with a date

ESTIMATED

Your assumption — say so, and say why

MEASURED

Observed behaviour: clicks, replies, payments

Idea to tested product in an afternoon

Live: what AI can do beyond a chat window

1

Describe the idea

Product and target group in plain words

2

Generate the product

Landing page and messaging

3

Build a test

Two propositions, two calls-to-action

4

Measure interest

Clicks and sign-ups, live

LIVE DEMO · CLAUDE CODE

You ask, the prototype changes. A student names a change — a new audience, a new headline, a third variant. Claude Code builds it into the running landing page; we open the result, not the code.

THE PROMPT ON STAGE

Update our landing page for [idea]. Create variant A (save time) and B (better applications), each with a measurable “Get early access” button. Show conversion per variant in the dashboard.

A real venture validator: five AI engines

Our system, applied to the business you just built — three kinds of evidence in one ledger

ENGINE • AI MECHANISM	WHAT IT DOES	FOR YOUR STARTUP TODAY
E4 Context Engine LLM RESEARCH AGENT	Reads competitor sites, reviews, regulation and news — extracts only what sources state	Who are the competitors, what do they charge students?
E5 Aggregate Research STATISTICAL AGENT	Official statistics, TAM / SAM / SOM — top-down and bottom-up	How many students are really in the target group?
E2 Simulated Mind NEURO-AI MODEL	Predicts a segment's attention and valuation response to a message or price	Which of your two messages gets attention first?
E3 Market World MULTI-AGENT SIMULATION	A synthetic market of buyer archetypes — trusted only once calibrated	How does the market react at €60 vs €30 a year?
E1 Cold Email Engine AUTONOMOUS EXPERIMENT	Finds, writes, sends, classifies replies — real behaviour, measured	Do real customers sign up when asked?

Behaviour over opinion: interviews explain — only a real test shows whether buyers reply, book or pay.

How evidence becomes a verdict

Cheap evidence first, real evidence only where uncertainty remains — a rule decides, not the AI

1 Secondary E4 + E5

Fast and cheap. Sets priors on market size, prices, competitors.

weight **0.2 – 0.9**

2 Simulated E2 + E3

Narrows where real evidence is worth the spend. Never validates alone.

weight **0.4**

3 Real E1

Slow (14–21 days). The only kind that reaches “validated”.

weight **0.7 – 1.0**

THE VERDICT · weighted evidence per hypothesis, from -1 to +1

Stop

score below -0.4

Iterate

between -0.4 and +0.4

Go

above +0.4, with real behaviour

One rule: below 30 real observations, confidence never exceeds “medium” — however convincing the AI sounds.

The 10-Minute AI Startup Challenge

Groups of 3–4, AI on your phone — one idea, ten minutes, one evidence-based recommendation

3 min

Quantify

Market size and revenue model from the data sheet. Tag every number.

2 min

Develop

One value proposition, one message — and the assumption behind it.

2 min

Validate

Scan the QR, see one variant, click or don't. Votes $\neq$ purchase intent.

3 min

Pitch

45 seconds: market, revenue, evidence, open assumption, next test.

WHAT EVERY GROUP HANDS IN (MENTI)

Market

Revenue

Evidence

Next test

QR → data sheet + prompt
skeptical-investor prompt

Repeat of Menti question 5 at the end: would you now invest €100,000 — and what changed your mind, the pitch or the clicks?

How AI-native will change founding

What this means for you — over the next five years

Building becomes cheap

A prototype, a landing page, a campaign — hours instead of months. What used to be the barrier is now a commodity.

Tiny teams, big companies

Founders with agents launch what used to need 20 people. Team size stops being a signal of ambition.

Judgement becomes scarce

Choosing which problem is worth solving — and which assumption to test first — is the human edge.

Speed of learning wins

The winner is not who builds fastest, but who learns fastest which idea really works.

Next step for you: take one assumption from your own project and design a one-week test with a kill criterion.

AI can generate a strategy. Evidence tells you whether it works.

The advantage is not generating answers faster — it is testing assumptions faster.

01

Identify

Find the opportunity

02

Quantify

Build the business case

03

Experiment

Collect real evidence

04

Decide

Go, iterate or stop

WHO WE ARE

EE-Partner (Milan) and asuno (Singapore) build AI-native systems for B2B companies — process automation for the DACH Mittelstand, and the Business Model Validator: an AI validation layer between idea and investment.
