1

What is the hardest part of selling today?

WORD CLOUD

2

How many cold emails does a B2B seller need for one qualified meeting?

POLL · REPEAT

20 · 50 · 100 · 200+

3

Which sales task should AI take over first?

POLL

Research · first message · follow-ups · forecasting

4

Which part of selling should AI never take over?

OPEN TEXT

5

By 2030, will companies employ more or fewer salespeople?

POLL

More · same · fewer · different profile

Live: AI linking millions of data points

Emidio demonstrates a highly complex AI workflow we developed — applied to sales: which companies have the pain, who to contact, with which message.

Millions of data points

Many sources linked in one model

Multiple AI agents

Research, matching and scoring in one flow

From data to decision

The output is a recommendation, not a dashboard

The AI-Native Sales Organization

How to identify customers, quantify their problems, build a sales engine and validate real demand with AI.

ChatGPT: 1 million users in just 5 days

Time it took to reach 1 million users

5 days

from launch to one million users —
faster than any consumer product
before it.

*For sales: your buyers adopted AI this fast
too — they research you before you call
them.*

Source: Statista, based on company announcements. ChatGPT launched on 30 November 2022.

AI's IQ: from 96 to 136 in one year

Best AI model on standardised IQ tests — one year apart

2024

IQ 96

Best model, offline test

2024

2025

IQ 136

Best model, Mensa Norway test

2025

Why AI is (still) hardly replacing jobs

Capability is rising fast — but real work is messy

-  So far, hardly any job losses from AI
-  AI hits its limits in complex, dynamic workflows
-  Office and routine work stable so far — despite automation risk
-  Demand for AI skills is growing sharply

For you: Research and first drafts are clean tasks. Trust, negotiation and judgement are messy — the seller's territory.

AI's ability to automate jobs is constrained by task "messiness"

AI task success rate by messiness of the task (%)

Tasks taking a human professional ≤ 1 hour. Source: METR / Measuring AI Ability (values read from published chart).

Core skills in 2030

Share of employers calling a skill core today (x) vs expecting it to grow by 2030 (y)

Source: World Economic Forum, Future of Jobs Report 2025, Figure 3.6.

1

AI and big data

the fastest-growing skill of all — almost 9 in 10 employers expect it to grow

2

Thinking skills stay core

analytical thinking, creative thinking, systems thinking

3

Human skills rise with AI

resilience, curiosity and lifelong learning, leadership

The seller of 2030: AI-literate and analytical — with empathy and active listening as the differentiator.

“Augmented Intelligence”

Not human or machine — the value sits in the overlap

HUMAN

Judgement, context, trust, responsibility

AI

Speed, scale, pattern recognition, tireless testing

AUGMENTED — SALES

A seller who lets AI research, write and classify — and spends the time on diagnosis, trust and the deal.

Rethinking sales

How selling worked, what AI enables today — and what AI-native sales means

	BEFORE	NOW, WITH AI	AI-NATIVE
Prospecting	Bought lead lists and cold calling	AI research on every account	Agents find who has the pain — before anyone is contacted
Messaging	One pitch for everyone	Personalised emails at scale	Every message tests a declared hypothesis
Pipeline	CRM as a contact list, manual reports	Auto-logging and reply classification	The pipeline as a learning system
The seller	Persuader, driven by volume	Seller with an AI assistant	Half analyst, half relationship builder

The trap in the middle column: AI makes it cheap to send more — not to sell better.

What we mean by “AI-native”

AI-native sales is not sending more emails — it is diagnosing before persuading

AI-ENABLED

The old process, plus an AI tool

AI writes the emails and the call notes. Same lead list, same pitch, same funnel — just more volume.

AI-NATIVE

The process redesigned around what AI makes cheap

Agents research the market, simulate the buyer and run campaigns as experiments. The seller decides the hypothesis and owns the meeting.

Agents do the work, humans set direction

Agents research, write and classify — the seller approves the hypothesis

Every decision is a hypothesis

“Trades owners will reply to a time-saving angle” — tested, not assumed

Every loop makes the system smarter

Every reply updates the segment, the message and the price

Evidence beats opinion

A booked meeting outweighs any lead score

In one line: sell less, ask more — AI does the diagnosis, the human builds the trust.

From market data to pain points

E4 Context Engine: AI extracts what sources state — it must not infer

CONTEXT ENGINE OUTPUT · AI SALES ASSISTANT FOR SMALL BUSINESSES

Owners lose 6–8 h a week on follow-ups and quotes

forum sample, $n \approx 40$

ESTIMATED

Comparable tools priced €49–€149 per month

6 vendor websites, Sept 2026

RESEARCHED

Top complaint in reviews: “too complex to set up”

review platforms, 120 reviews

RESEARCHED

Owners would pay for a tool that writes follow-ups

no source

INFERRED — NOT EVIDENCE

Stated vs inferred

Stated: a source says it, with a date and a sample. Grade it and keep it.

Inferred: sounds plausible, nobody said it. It becomes a hypothesis — never a fact on a slide.

The difference between research and fiction.

Exercise · 4 min · three pain hypotheses for small-business owners — and the evidence you need before writing a single email.

The AI-native sales engine

E1 Cold Email Engine: an autonomous experiment loop — every campaign tests a declared hypothesis

THE HYPOTHESIS FORMAT

“If we message [segment] about [pain] with [angle], at least X % will reply positively within 14 days.”

Objection: price / timing / trust / no need

Live demo · Claude Code: you give the ICP and two pain angles — the tool builds both campaign variants live.

Five AI engines behind AI-native sales

E1 is the one you see — four more decide where it is worth sending at all

ENGINE • AI MECHANISM	WHAT IT DOES	WHAT IT MEANS FOR SALES
E4 Context Engine LLM RESEARCH AGENT	Reads competitor sites, reviews, regulation and news — extracts only what sources state	Which segment has the pain, which objections are public?
E5 Aggregate Research STATISTICAL AGENT	Official statistics, TAM / SAM / SOM — top-down and bottom-up	How many in-target companies exist — the funnel ceiling
E2 Simulated Mind NEURO-AI MODEL	Predicts a segment's attention and valuation response to a message or price	Which of two messages wins attention before the first send
E3 Market World MULTI-AGENT SIMULATION	A synthetic market of buyer archetypes — trusted only once calibrated	Price elasticity and dealbreakers — your negotiation prep
E1 Cold Email Engine AUTONOMOUS EXPERIMENT	Finds, writes, sends, classifies replies — real behaviour, measured	Reply, positive and meeting rate per segment × variant

Behaviour over opinion: simulation narrows the bet — only a real reply, meeting or contract proves it.

The 10-Minute Sales Challenge

Groups of 3–4, AI on your phone — build the sales case: who buys, why, and how you would know

3 min

Quantify

ICP size, customer ROI and the funnel to €100k ARR — every number tagged.

2 min

Develop

One outreach message and the single assumption it rests on.

2 min

Validate

Two messages per group go to Menti. The class votes and names the first objection.

3 min

Pitch

45 seconds: ICP, ROI, funnel maths, evidence from the vote, next experiment.

WHAT EVERY GROUP HANDS IN (MENTI)

ICP

Pain (quantified)

Message

Qualification

Success metric

QR → data sheet + prompt
Segments: trades ·
agencies · e-commerce

Remember: a vote is what people say. A reply is what people do.

What a real campaign looks like

What the room preferred vs. what real buyers did

ANONYMISED CAMPAIGN · REPLACE WITH REAL FIGURES

Reply 4.0% · positive 1.2% · meeting 0.6% · cycle 14–21 days · top objections: timing, “we have a tool”, price

Answer to Menti question 2

≈ 170

emails per qualified meeting

Weight by kind of evidence

Real behaviour (replies)	1.0
Real statement (the vote)	0.7
Simulated	0.4

The pipeline is a learning system, not a list: it feeds product, pricing and strategy.

How AI-native will change sales

The seller of 2030: half analyst, half relationship builder

Agents run the top of the funnel

List, research, first message, follow-ups and reply classification — done by AI, approved by humans.

Buyers bring their own AI

Procurement agents compare offers before a human talks. Your data and claims must survive machine scrutiny.

Humans own trust and the deal

Diagnosis, the meeting, pricing judgement, negotiation — and saying no to bad-fit leads.

Paid for learning, not only volume

Teams are measured on documented insight per contact — every objection is data for product and pricing.

Three statements to take home: diagnose before you persuade · every campaign is an experiment · behaviour outweighs opinion.

AI can generate a strategy. Evidence tells you whether it works.

The advantage is not generating answers faster — it is testing assumptions faster.
