1

One word: what is a CRM to you today?

WORD CLOUD

2

Who holds the most valuable customer information?

POLL

Manufacturer · distributor ·
retailer · consumer

3

As CEO of a consumer brand, what would you invest in first?

POLL · REPEAT

Marketing · data integration · AI
forecast

4

How much would you let an AI forecast decide your production plan?

SCALE 0-100%

5

By 2030, who manages customer relationships?

POLL

People · AI agents · both

Live: AI linking millions of data points

Emidio demonstrates a highly complex AI workflow we developed — applied to a value chain: linking supply data and customer behaviour.

Millions of data points

Many sources linked in one model

Multiple AI agents

Research, matching and scoring in one flow

From data to decision

The output is a recommendation, not a dashboard

The AI-Powered Customer Ecosystem

Connecting supply-side value chains with demand-side behaviour through CRM, data and artificial intelligence.

Rome, October 2026

ChatGPT: 1 million users in just 5 days

Time it took to reach 1 million users

5 days

from launch to one million users —
faster than any consumer product
before it.

*For CRM: customers now ask an AI
assistant before they ask your brand — a
new channel.*

Source: Statista, based on company announcements. ChatGPT launched on 30 November 2022.

AI's IQ: from 96 to 136 in one year

Best AI model on standardised IQ tests — one year apart

2024

IQ 96

Best model, offline test

2024

2025

IQ 136

Best model, Mensa Norway test

2025

Why AI is (still) hardly replacing jobs

Capability is rising fast — but real work is messy

-  So far, hardly any job losses from AI
-  AI hits its limits in complex, dynamic workflows
-  Office and routine work stable so far — despite automation risk
-  Demand for AI skills is growing sharply

For you: Forecasting is a clean task. Aligning manufacturer, distributor and retailer is messy — that is the CRM job.

AI's ability to automate jobs is constrained by task "messiness"

AI task success rate by messiness of the task (%)

Tasks taking a human professional ≤ 1 hour. Source: METR / Measuring AI Ability (values read from published chart).

Core skills in 2030

Share of employers calling a skill core today (x) vs expecting it to grow by 2030 (y)

Source: World Economic Forum, Future of Jobs Report 2025, Figure 3.6.

1

AI and big data

the fastest-growing skill of all — almost 9 in 10 employers expect it to grow

2

Thinking skills stay core

analytical thinking, creative thinking, systems thinking

3

Human skills rise with AI

resilience, curiosity and lifelong learning, leadership

The CRM role of 2030: AI and big data plus systems thinking — the top-right quadrant.

“Augmented Intelligence”

Not human or machine — the value sits in the overlap

HUMAN

Judgement, context, trust, responsibility

AI

Speed, scale, pattern recognition, tireless testing

AUGMENTED — CRM

AI connects millions of signals along the chain — people decide what to share, whom to trust and what to do.

Rethinking CRM

How CRM worked, what AI enables today — and what an AI-native customer ecosystem means

	BEFORE	NOW, WITH AI	AI-NATIVE
Data	Contact records in silos	Unified customer data, cleaned by AI	A shared evidence ledger across the value chain
Insight	Monthly manual reports	AI dashboards and forecasts	Real-time signals, each with a weight
Action	Reactive campaigns	Next-best-action suggestions	Agents act — humans set the guardrails
Relationship	Owned by whoever sells	Omnichannel journeys	Supply and demand side learn together

The trap in the middle column: AI on top of silos gives you faster reports — not a connected customer.

What we mean by “AI-native”

An AI-native CRM is not a smarter contact database — it is the structure that lets the whole chain learn

AI-ENABLED

The old process, plus an AI tool

An AI assistant on top of the CRM writes emails, scores leads and summarises reports. The silos stay where they were.

AI-NATIVE

The process redesigned around what AI makes cheap

Manufacturer, distributor, retailer and consumer signals flow into one structure. Agents forecast, detect gaps and propose actions.

Agents do the work, humans set direction

Agents forecast and propose — humans approve stock and campaign moves

Every decision is a hypothesis

“Redistribute to South” is a hypothesis until next week's sell-out

Every loop makes the system smarter

Every forecast is checked against reality — the model calibrates

Evidence beats opinion

Point-of-sale behaviour outweighs what a survey says

In one line: connect customer behaviour with supply decisions — and make every interaction part of a learning process.

Two worlds, disconnected

The brand knows it shipped 1,000 cases — not who bought them, or why

SUPPLY SIDE • WHAT THE COMPANY DECIDES

Missing connection: shared customer intelligence. Two or three handovers where the signal is lost.

DEMAND SIDE • WHAT THE CUSTOMER DOES

Lead question for today: how do we connect these two worlds — without pooling every piece of personal data?

Quantify the cost of disconnected data

Same product, same period, two regions — what would you recommend to the manufacturer?

ILLUSTRATIVE DATA · ZERO OPENING STOCK, NO RETURNS

	North	South
Sell-through	40%	97%
Remaining stock	600	10

MENTI · How much revenue did South lose to the stockout?

0 · < €5k · €5–20k · > €20k · cannot know from this data

The lost demand in South is not in the data — the stockout hides it.

AI can only learn from what the chain shares: redistribution depends on cost, shelf life — and evidence you don't have yet.

From data to decisions — live

Integration pays off only when it changes a decision and an action

Demand forecasting

Regional demand from history, seasonality, external factors

KPI · FORECAST ERROR

Inventory optimisation

Detect imbalances, recommend redistribution

KPI · STOCKOUT RATE

Customer intelligence

Buying behaviour across channels and regions

KPI · REPEAT PURCHASE

Next-best action

Campaign, assortment change or distributor action

KPI · INCREMENTAL REVENUE

LIVE DEMO · CLAUDE CODE · CHANNEL INTELLIGENCE

You choose the new input: a third region, last year's demand, returns or a promotion calendar. Claude Code adds it to the prepared app — the dashboard recalculates and a new recommendation appears.

AI RECOMMENDATION

Investigate excess stock in North and stockout risk in South before deciding on replenishment.

1,300 shipped · 690 sold · 610 remaining

Five AI engines along the value chain

Each engine produces data for the customer intelligence layer — three kinds of evidence, one ledger

ENGINE • AI MECHANISM	WHAT IT DOES	WHAT IT PRODUCES FOR THE CHAIN
E4 Context Engine LLM RESEARCH AGENT	Reads competitor sites, reviews, regulation and news — extracts only what sources state	Competitor assortments, retail prices, reviews, regulation
E5 Aggregate Research STATISTICAL AGENT	Official statistics, TAM / SAM / SOM — top-down and bottom-up	Points of sale and consumers per region — the demand ceiling
E2 Simulated Mind NEURO-AI MODEL	Predicts a segment's attention and valuation response to a message or price	Consumer response to a pack, claim or price — before listing
E3 Market World MULTI-AGENT SIMULATION	A synthetic market of buyer archetypes — trusted only once calibrated	Simulated distributors, retailers, consumers — channel elasticity
E1 Cold Email Engine AUTONOMOUS EXPERIMENT	Finds, writes, sends, classifies replies — real behaviour, measured	Real reactions from trade partners to a new channel

Behaviour over opinion: a sell-out, a reorder or a partner's reply outweighs any forecast — and calibrates it.

The AI CRM Challenge

Groups of 3–4, AI on your phone — find the gap, price it, recommend an action

3 min

Quantify

The key information gap between manufacturer, distributor and consumer — the opportunity in €, tagged.

2 min

Develop

One operational or marketing action, with the actor who executes it.

2 min

Validate

We release next week's sell-out by region. Does your recommendation survive?

3 min

Pitch

45 seconds: gap, impact, action, did it survive, what you still need.

WHAT EVERY GROUP HANDS IN (MENTI)

Data gap

Financial impact

AI recommendation

Validation method

QR → data sheet + prompt
Week 5 sell-out released
at minute 5

Repeat of Menti question 3 at the end: as CEO, what would you invest in first — and did your answer change?

How AI-native will change CRM

From a system of records to a system that acts — and learns

From records to agents

The CRM no longer waits for input: agents forecast, detect gaps and propose the next action — humans approve.

The consumer's AI is a new channel

Customers ask their AI assistant what to buy. Brands must be understandable to machines, not only to people.

Shared data, clear governance

Value comes from what the chain shares — permitted access and aggregates, not pooling every personal detail.

New KPIs: calibration

Not just revenue per customer — forecast error, stockout rate and how fast the model learns from reality.

Three statements: connect behaviour with supply decisions · make every interaction a learning loop · turn fragmented data into action.

AI can generate a strategy. Evidence tells you whether it works.

The advantage is not generating answers faster — it is testing assumptions faster.

01

Identify

Find the opportunity

02

Quantify

Build the business case

03

Experiment

Collect real evidence

04
