1

Be honest: did AI help with your last university assignment?

POLL

Yes · a bit · no · I plead the fifth

2

If building cost nothing — what would you build?

WORD CLOUD

3

Will a one-person company be worth \$1 billion before 2030?

POLL

Yes · no · it already happened

4

What worries you more about AI and your career?

POLL

It takes my job · I don't use it well enough · nothing

5

After graduation, would you rather...

POLL · REPEAT

Start my own company · join a startup · join a corporate

Live: AI linking millions of data points

Emidio demonstrates a highly complex AI workflow we developed — turning millions of data points into a go / no-go for a new business idea.

Millions of data points

Many sources linked in one model

Multiple AI agents

Research, matching and scoring in one flow

From data to decision

The output is a recommendation, not a dashboard

From Idea to Market: Building an AI-Native Business

Why building is no longer the hard part — and what is.

ChatGPT: 1 million users in just 5 days

Time it took to reach 1 million users

5 days

from launch to one million users —
faster than any consumer product
before it.

*For founders: your market — and your
competitors — can now move this fast
too.*

Source: Statista, based on company announcements. ChatGPT launched on 30 November 2022.

AI's IQ: from 96 to 136 in one year

Best AI model on standardised IQ tests — one year apart

2024

IQ 96

Best model, offline test

2025

IQ 136

Best model, Mensa Norway test

Source: TrackingAI.org (MaximumTruth.org) — IQ scores, average of last 7 tests. Average human = 100.

Why AI is (still) hardly replacing jobs

Capability is rising fast — but real work is messy

-  So far, hardly any job losses from AI
-  AI hits its limits in complex, dynamic workflows
-  Office and routine work stable so far — despite automation risk
-  Demand for AI skills is growing sharply

For you: AI takes the clean tasks. Building a company is messy work — that is where you add value.

AI's ability to automate jobs is constrained by task "messiness"

AI task success rate by messiness of the task (%)

Tasks taking a human professional ≤ 1 hour. Source: METR / Measuring AI Ability (values read from published chart).

Core skills in 2030

Share of employers calling a skill core today (x) vs expecting it to grow by 2030 (y)

Source: World Economic Forum, Future of Jobs Report 2025, Figure 3.6.

1

AI and big data

the fastest-growing skill of all — almost 9 in 10 employers expect it to grow

2

Thinking skills stay core

analytical thinking, creative thinking, systems thinking

3

Human skills rise with AI

resilience, curiosity and lifelong learning, leadership

The founder profile of 2030: AI-literate, analytical, creative — and curious enough to test.

“Augmented Intelligence”

Not human or machine — the value sits in the overlap

HUMAN

Judgement, context, trust, responsibility

AI

Speed, scale, pattern recognition, tireless testing

AUGMENTED — FOUNDERS

A founder who lets AI research, build and test — and keeps judgement on what is worth building.

2015 vs. 2026: what it takes to launch

Same idea, same goal — first real customer signal

ILLUSTRATIVE

2015

Research
6 weeks

Prototype
3 months

Launch
4 weeks

First feedback
2 months

2026

The whole loop: one weekend. Research 30 min · prototype 3 h · launch 1 h · first signal 48 h

TEAM

~~5 people~~

1 founder + agents

BUDGET

~~€100,000+~~

< €500

TIME TO FIRST SIGNAL

~~~6 months~~

**1 weekend**

# Tiny teams, giant outcomes

The first generation of AI-native companies — reported figures

## Lovable

Sweden · AI app builder

**\$100M**

annual recurring revenue about 8 months after launch

REPORTED

## Cursor

USA · AI code editor

**\$100M**

annual recurring revenue in roughly a year, with a small team

REPORTED

## Midjourney

USA · AI image generation

**~\$200M**

revenue in 2023 with a team of around 40, no outside funding

REPORTED

**What they share:** AI is not only in the product — it runs the company. Small teams, agents everywhere, shipping every day.

*Sources: company statements and press reports, 2023–2025. Figures as reported, not audited.*

# What we mean by “AI-native”

AI-native is not using more AI tools — it is building the company around them

## AI-ENABLED

### The old process, plus an AI tool

ChatGPT writes the pitch deck, the copy and the business plan. The steps and the decisions stay the same — just faster.

## AI-NATIVE

### The process redesigned around what AI makes cheap

Agents research, build and test continuously; founders set hypotheses and decide on evidence. Small teams do what took 20 people.

### Agents do the work, humans set direction

Founders choose what to test — agents research, build and run it

### Every decision is a hypothesis

“Students will pay for this” is an assumption with a kill criterion

### Every loop makes the system smarter

Each experiment sharpens the next — learning compounds

### Evidence beats opinion

A click, sign-up or payment outweighs any AI-generated forecast

**In one line:** an AI-native company does not just generate answers faster — it tests its assumptions faster than anyone else.

# Build – Measure – Learn, AI edition

Lean Startup (Ries, 2011): AI collapses “build” — “learn” becomes the bottleneck

# 35%

of failed startups name “no market need” as a reason — they built something nobody wanted.

*Source: CB Insights, startup post-mortems (2021).*

## The new founder question

Not “can we build it?” — **“what is the cheapest test that could prove us wrong this week?”**

# Live: from your idea to a tested product

The room picks the idea — AI builds it and puts it in front of you

1

## You pick the idea

Top answer from Menti question 2

2

## AI builds it

Landing page and two value propositions

3

## You visit it

QR code — every phone in the room

4

## We measure

Clicks on “Get early access”, live

LIVE DEMO · CLAUDE CODE

**You ask, the product changes.** Name a change — a new audience, a new headline, a third variant. Claude Code builds it into the running page in minutes. We open the result, not the code.

### THE PROMPT ON STAGE

Build a landing page for [idea]. Create variant A and B with two different value propositions, each with a measurable “Get early access” button. Show clicks per variant in a live dashboard.

# How we validate at AI speed: five engines

Our system for the “learn” step — three kinds of evidence in one ledger

| ENGINE • AI MECHANISM                                          | WHAT IT DOES                                                                            | FOR YOUR STARTUP                                        |
|----------------------------------------------------------------|-----------------------------------------------------------------------------------------|---------------------------------------------------------|
| <b>E4</b><br><b>Context Engine</b><br>LLM RESEARCH AGENT       | Reads competitor sites, reviews, regulation and news — extracts only what sources state | <b>Who are the competitors and what do they charge?</b> |
| <b>E5</b><br><b>Aggregate Research</b><br>STATISTICAL AGENT    | Official statistics, TAM / SAM / SOM — top-down and bottom-up                           | <b>How many people really have the problem?</b>         |
| <b>E2</b><br><b>Simulated Mind</b><br>NEURO-AI MODEL           | Predicts a segment's attention and valuation response to a message or price             | <b>Which message gets attention — before you spend?</b> |
| <b>E3</b><br><b>Market World</b><br>MULTI-AGENT SIMULATION     | A synthetic market of buyer archetypes — trusted only once calibrated                   | <b>How does the market react to a different price?</b>  |
| <b>E1</b><br><b>Cold Email Engine</b><br>AUTONOMOUS EXPERIMENT | Finds, writes, sends, classifies replies — real behaviour, measured                     | <b>Do real people sign up, book or pay?</b>             |

**Behaviour over opinion:** interviews explain — only a real test shows whether people click, sign up or pay.

# The 10-Minute Startup Speed-Run

Groups of 3–4, AI on your phone — from a problem you know to a test you could run this week

2 min

## Problem

A problem someone in your group really has. Who else has it?

3 min

## Size it

Let AI estimate the market and a price. Tag every number: researched or estimated.

3 min

## Test it

Your riskiest assumption — and a 48-hour test with a kill criterion.

2 min

## Pitch

30 seconds: problem, customer, assumption, test, kill criterion.

### WHAT EVERY GROUP HANDS IN (MENTI)

Problem

Customer

Riskiest  
assumption

48-hour test

Kill criterion

QR → data sheet + prompt  
skeptical-investor prompt  
included

*The best pitch is not the best idea — it is the cheapest test that could prove you wrong.*

# Said vs. did: your live result

What the room said in Menti vs. what the room clicked on the landing page

EXAMPLE VALUES — REPLACE WITH LIVE RESULT

## The say-do gap

People are kind in surveys and honest with their clicks — and even more honest with their money. This gap is where most startups die.

### Weight of evidence

|                         |     |
|-------------------------|-----|
| What people say (Menti) | 0.7 |
| What people do (click)  | 1.0 |

**Repeat Menti question 5:** start your own company, join a startup or a corporate — did today change your answer?

# What this means for you

Four shifts for anyone who wants to build something in the next five years

## You can start before you graduate

A product, a landing page, first customers — the barrier is no longer money or a dev team.

## Your first hires may be agents

Research, design, code, outreach. Your job: direct them — and check their work.

## Taste and judgement become the edge

Anyone can build. Choosing the right problem and reading evidence honestly is what remains scarce.

## Learn faster than the market

The winner is not who builds fastest, but who learns fastest which idea really works.

**Next step: take one assumption from your own project and design a 48-hour test with a kill criterion.**

# AI can generate a strategy. Evidence tells you whether it works.

The advantage is not generating answers faster — it is testing assumptions faster.

01

## Identify

Find the opportunity

02

## Quantify

Build the business case

03

## Experiment

Collect real evidence

04

## Decide

Go, iterate or stop

### WHO WE ARE

EE-Partner (Milan) and asuno (Singapore) build AI-native systems for B2B companies — process automation for the DACH Mittelstand, and the Business Model Validator: an AI validation layer between idea and investment.

### WORK WITH US

Thesis topics, internships and pilot participation for students.
