1 One word: what is a CRM to you today?

WORD CLOUD

2 Who will manage customer relationships in 2030?

POLL

People · AI agents · both, with clear rules

3 Would you let an AI agent answer a customer complaint without human review?

POLL

Yes · only small cases · never

4 How much do you trust companies with your personal customer data?

SCALE 1-5

5 As CMO with €1M for CRM — where does it go first?

POLL · REPEAT

Data quality · AI agents · new software · people

Live: AI linking millions of data points

Emidio demonstrates a highly complex AI workflow we developed — applied to customers: millions of interactions turned into one customer view and a next best action.

Millions of data points

Many sources linked in one model

Multiple AI agents

Research, matching and scoring in one flow

From data to decision

The output is a recommendation, not a dashboard

The Future of CRM: AI-Native Customer Relationships

How CRM systems will work, how AI gets into them — and what still holds from the textbook.

ChatGPT: 1 million users in just 5 days

Time it took to reach 1 million users

5 days

from launch to one million users —
faster than any consumer product
before it.

*For CRM: customers now ask an AI
assistant before they ask your brand — a
new touchpoint.*

Source: Statista, based on company announcements. ChatGPT launched on 30 November 2022.

AI's IQ: from 96 to 136 in one year

Best AI model on standardised IQ tests — one year apart

Why AI is (still) hardly replacing jobs

Capability is rising fast — but real work is messy

-  So far, hardly any job losses from AI
-  AI hits its limits in complex, dynamic workflows
-  Office and routine work stable so far — despite automation risk
-  Demand for AI skills is growing sharply

For you: Answering a standard question is a clean task. Rescuing a relationship is messy — that stays human.

AI's ability to automate jobs is constrained by task "messiness"

AI task success rate by messiness of the task (%)

Tasks taking a human professional ≤ 1 hour. Source: METR / Measuring AI Ability (values read from published chart).

Core skills in 2030

Share of employers calling a skill core today (x) vs expecting it to grow by 2030 (y)

Source: World Economic Forum, Future of Jobs Report 2025, Figure 3.6.

1

AI and big data

the fastest-growing skill of all — almost 9 in 10 employers expect it to grow

2

Thinking skills stay core

analytical thinking, creative thinking, systems thinking

3

Human skills rise with AI

resilience, curiosity and lifelong learning, leadership

The CRM profile of 2030: AI and data skills plus empathy and service orientation.

“Augmented Intelligence”

Not human or machine — the value sits in the overlap

HUMAN

Judgement, context, trust, responsibility

AI

Speed, scale, pattern recognition, tireless testing

AUGMENTED — CRM

Agents handle millions of routine interactions — people own the relationships that matter and set the rules.

Rethinking CRM

The classic CRM types — how they worked, what AI does today, what AI-native means

	BEFORE	NOW, WITH AI	AI-NATIVE
Operational CRM	Sales, service and marketing records typed in by hand	Auto-logging, AI-written emails and call summaries	Agents run service, sales and marketing tasks end-to-end
Analytical CRM	Monthly reports and RFM segments	Predictive scores: churn, CLV, propensity	A segment of one — models update with every interaction
Collaborative CRM	Silos between departments and partners	Shared dashboards across teams	One customer context shared by people, agents and partners
Strategic CRM	CRM as an IT project	AI pilots on top of the CRM	The CRM as the company's learning system

The taxonomy from your course still holds. What changes is who does the work — and how fast the system learns.

Back to the textbook: the theory holds

Four concepts from your CRM course — and what AI changes about them

CONCEPT	WHAT IT SAYS	WHAT AI CHANGES
Customer lifetime value <i>Kumar & Reinartz</i>	Invest in customers according to their future value, not past revenue	CLV predicted per customer, updated daily — and acted on by agents
Strategic CRM framework <i>Payne & Frow, 2005</i>	Strategy, value creation, multichannel integration, information management, performance	Information management and channel integration become largely automated
Customer journey <i>Lemon & Verhoef, 2016</i>	Experience is created across touchpoints — many outside the firm's control	Journeys orchestrated in real time — including the customer's own AI assistant
Commitment–trust theory <i>Morgan & Hunt, 1994</i>	Relationships rest on commitment and trust	When AI speaks for the brand, trust becomes the scarce asset

Takeaway: AI does not replace CRM theory — it finally makes it executable at scale.

The CRM of 2030: a system that acts

What a future CRM system looks like — from storing data to taking action

INTERACTION

Every channel: web, app, email, chat, voice — and the customer's own AI assistant

AGENTS

Service, sales and marketing agents act within guardrails — people handle the exceptions

INTELLIGENCE

Predictive models (churn, CLV, next best action) + LLMs that read emails, calls and reviews

DATA

Unified, consented customer data — linked to ERP, e-commerce and service systems

GOVERNANCE & TRUST
GDPR · AI Act · consent · audit trail

WHAT IS NEW

1

From records to context

Most customer knowledge is text — LLMs make it usable.

2

From dashboards to actions

The system does not only show the next best action — it takes it.

3

From one channel owner to many agents

Including agents that act for the customer.

From system of record to system of action: the CRM stops waiting for input and starts doing the work.

A day in the CRM of 2030

One complaint, five steps, a few minutes — case: a European online fashion brand

ILLUSTRATIVE

Today The ticket waits in a queue, a service agent opens three systems, the customer waits two days — and may be gone.

2030 Answered in minutes, within clear rules. People handle the cases above the threshold — and the relationships that matter.

How AI gets into an existing CRM

Four integration patterns — from switching on a feature to building your own layer

EFFORT ●○○○ → ●●●●

THE ROADMAP — THE SAME IN EVERY CASE

Live: an AI agent inside the CRM

Pattern 03 on stage — an agent reads, analyses and writes back to a CRM

1

Sandbox CRM

Synthetic customers, orders and tickets

2

Connect

Claude Code via API or MCP connector

3

Analyse

Find falling order frequency, estimate CLV

4

Write back

Draft emails as tasks — a person approves

LIVE DEMO · CLAUDE CODE

You set the rules. Change the segment or add a guardrail — for example “only customers who agreed to marketing emails” — and the agent reruns in seconds.

THE PROMPT ON STAGE

Find customers whose order frequency dropped by half in the last 90 days. Estimate their CLV. For the top 10, draft a personal win-back email and create a review task. Do not send anything.

Beyond your own data: five AI engines

Your CRM knows today's customers — BMV adds evidence about the ones you don't have yet

ENGINE • AI MECHANISM	WHAT IT DOES	WHAT IT ADDS TO THE CRM
E4 Context Engine LLM RESEARCH AGENT	Reads competitor sites, reviews, regulation and news — extracts only what sources state	What competitors offer your customers — prices, reviews, rules
E5 Aggregate Research STATISTICAL AGENT	Official statistics, TAM / SAM / SOM — top-down and bottom-up	How many potential customers exist per segment
E2 Simulated Mind NEURO-AI MODEL	Predicts a segment's attention and valuation response to a message or price	How a segment reacts to a new offer — before the campaign
E3 Market World MULTI-AGENT SIMULATION	A synthetic market of buyer archetypes — trusted only once calibrated	Simulated customers test a new loyalty or pricing model
E1 Cold Email Engine AUTONOMOUS EXPERIMENT	Finds, writes, sends, classifies replies — real behaviour, measured	Real reactions from prospects to a new offer

Behaviour over opinion: your CRM explains today's customers — real tests reveal tomorrow's.

Design an AI-native CRM for LUISS

Groups of 3–4, AI on your phone — your university is the company, you are the customer

3 min

Map

The lifecycle: applicant → student → alumnus → recruiter or donor. Where is data — where is it lost?

3 min

Design

One agent at one moment of truth: what does it do, with which data?

2 min

Guard

One KPI and one guardrail: what may the agent never do without a human?

2 min

Pitch

30 seconds: moment, agent, data, KPI, guardrail.

WHAT EVERY GROUP HANDS IN (MENTI)

Moment of truth

Agent use case

Data needed

KPI

Guardrail

QR → data sheet + prompt
Lifecycle template +
prompt

Remember Morgan & Hunt: would you, as a student, trust this agent? If not, the design fails.

What this means for CRM — and for you

Four shifts for anyone working with customers in the next five years

From CRM user to agent manager

You will configure, supervise and improve agents — not fill in fields.

Data quality is strategy

Clean, consented first-party data is the moat. An agent is only as good as the data it acts on.

New KPIs

Next to CLV and retention: AI resolution rate, escalation rate — and how well forecasts match reality.

Trust is the differentiator

Commitment–trust still applies: customers stay with brands they trust with their data and with their agents.

Three statements: the theory holds · the CRM becomes a system of action · trust is the scarcest asset.

AI can generate a strategy. Evidence tells you whether it works.

The advantage is not generating answers faster — it is testing assumptions faster.

01

Identify

Find the opportunity

02

Quantify

Build the business case

03

Experiment

Collect real evidence

04

Decide

Go, iterate or stop

WHO WE ARE

EE-Partner (Milan) and asuno (Singapore) build AI-native systems for B2B companies — process automation for the DACH Mittelstand, and the Business Model Validator: an AI validation layer between idea and investment.
